Support

This eighth edition of an annual report on state tax support of higher education documents an increase in appropriations from \$1.4 billion in 1959-60 to \$4.4 billion in 1967-68. Despite the large sums involved and the percentage increases, however, the states have not generally kept up with the increasing responsibilities placed on public higher education. While annual operating costs rise faster than enrollment, the rapid growth in enrollment has been a major contributor to the unprecedented financial and other demands faced by higher education. Also contributing to higher operating costs are continuing inflation, rising faculty salaries, the knowledge explosion with its implications for curricula and staffing, and the flood of new costly but necessary apparatus and equipment. The report covers only appropriations of state tax funds for operating expenses of institutions and does not include appropriations for buildings and other capital outlays. The appropriations include support for instructional programs, research (including agricultural and engineering experiment stations), and a great many public services, such as general extension, adult education programs, etc. The data are derived from the month-by-month and year-by-year operation of "Grapevine," a small monthly newsletter circulated to key persons in each of the 50 states. PREFACE

Once again, we are proud to publish Dr. M. M. Chambers' annual report of state tax appropriations for operating expenses of higher education. In the eight years Dr. Chambers has prepared this report, its value has clearly been established as a timely summary of state efforts to support higher education.

In its eight year history, this report has documented an unprecedented growth in tax support for higher education. State appropriations for operating expenses have tripled since Professor Chambers started compiling figures in 1959. A total of \$4.4 billion has been appropriated this year compared to \$1.4 billion in 1959-60. This reflects a 214 percent increase over an eight-year period. In some states, the increase has been much more dramatic, reaching 449 percent in New York and 374 percent in Massachusetts, for example.

The figures reported by Professor Chambers are impressive and reflect an important commitment on the part of the states to higher education. However, despite the large sums involved and the impressive percentage increases, the states have not—in general—kept up with the increasing responsibilities placed on public higher education. As its support has grown, demands and costs have risen even more rapidly.

Professor Chambers has pointed out, "These splendid gains /in state appropriations/ are not, of course, as phenomenal as they may seem at first when measured alongside the increase in total population, the bulge in the population of college age, the upward movement of the proportion of high school graduates going on to college...the growing length of stay in college which augments enrollments at the upper division, graduate, and graduate-professional levels, the increasing proportion of all students beyond high school attending public institutions of higher education, and many other relevant factors."

Although state tax support is rising in dollars, it has declined as a percentage of total income for many public institutions. State tax support now accounts for an average of approximately 40 percent of state college and university income. With growing competition for state tax dollars, this proportion threatens to decline even more although dollar support will continue to grow. The great question for the future is whether the public commitment to educational opportunity for all who can benefit will be matched by the funds needed to keep the doors to higher education open without sacrificing quality. Undergraduate student-faculty ratios, for example, have been slowly increasing at state universities because of a lack of funds to hire as many new faculty members as are needed to keep up with rising enrollments.

professor Chambers shows in his introduction why annual operating costs rise faster than enrollment. Nonetheless, the rapid growth in enrollment has been a major contributor to the unprecedented financial and other demands faced by higher education. There are approximately 6½ million students enrolled in our colleges and universities this year, almost twice as many as in 1959 when the first edition of this report was issued. By 1975, national enrollments are expected to exceed nine million. This means that higher education must add as many new students in the next eight years as were enrolled in <u>all</u> institutions only 13 years ago.

As the demand for higher education has increased, public institutions in particular have felt the strain of growth. In 1951, public and private institutions each enrolled about 1 million students. Although both sectors of higher education have been growing steadily since 1951, public institutions have added three out of every four new students.

In accepting the challenge of expansion, public institutions have been determined to guarantee <u>quality</u> as well as quantity. In an age of rapidly rising equipment charges, construction costs, faculty and other salaries, quality takes money--and lots of it.

"It takes all the running you can do to keep in the same place," the Red Queen told Alice in Through the Looking Glass. "If you want to get somewhere else, you must run at least twice as fast." This is the disconcerting reality that colleges and universities must face in preparing their budget requests and that governors and legislators must acknowledge in acting on the requests.

In trying to attract the best possible faculty members, for example, public universities have raised average salaries for full professors from \$11,295 to \$15,028 between 1961 and 1966. At the same time, however, private independent universities raised salaries for full professors from \$12,959 to \$17,390. So, despite a 33 percent increase over a five-year period, public universities still trail private universities in faculty salaries. Professors at public universities now earn \$2,362 less than their private university counterparts. In 1961, the difference was only \$1,664.

In this competitive period, many states which appear to be doing all they can for higher education must manage to double or triple their efforts. Some states which seem to be making the greatest progress in increasing appropriations still lag far behind the rest of the nation in their support of higher education. Massachusetts, for example, shows one of the largest percentage increases in state appropriations but is still at the bottom of the country in (1) per capita support of higher education, (2) the proportion of residents to whom public higher education is available, and (3) the proportion of high school graduates who go on to college. Some southern states which have shown dramatic, above average gains in appropriations—North Carolina and Georgia for example—still remain below the national average in per capita support of higher education. States like Alabama and Mississippi, which have more than doubled state tax support for higher education in the last eight years, are not closing the gap as the rest of the nation takes larger steps forward.

One of the most distressing indicators of the inability of state governments to meet the needs of public higher education is the annual wave of announcements of tuition increases designed to compensate for deficits created by cuts in university budgets. California's controversy leading to a cut in state appropriations below the previous year and increased student charges, has received nationwide attention in the past year. In Florida, a substantial increase in state appropriations and student charges resulted in a budget for the state university system on a reduced per full-time student basis as compared to the previous biennium.

Even in Ohio, despite record appropriations, Ohio State University has asked for a \$15 per quarter increase in student fees to offset its deficit. In Michigan, Wavne State University announced a \$3.1 million increase in student tuition and fees this year because state appropriations were more than \$10 million below the university's initial request for funds to meet its on-going needs and only 3.8 percent higher than last year's appropriation. Other institutions in Michigan and Ohio also raised fees for similar reasons.

Trustees of the University of New Hampshire increased in-state tuition sharply this year "to ease a financial crisis prompted by a biennial state appropriation which is \$4.1 million below the University's needs." The New Mexico legislature decreed a tuition increase of \$30 for in-state students and \$60 for out-of-state students to make up the difference between what the university already considered to be a bare-bones budget and legislative appropriations below the sum requested in the pared budget.

These actions represent a dangerous threat to the American commitment to low-cost educational opportunity. Recent studies have shown that students at public institutions are most likely to come from lower income families and are least able to keep up with the mounting costs of getting a higher education. For every talented student denied the opportunity to get a higher education for lack of funds, society may lose a doctor, a scientist, or a teacher it badly needs.

In sum, although state tax support of higher education has shown impressive gains in recent years, it is obvious that increased demands on public higher education have often outstripped new support. The projected growth of public institutions over the next decade gives no opportunity for complacency or for reduced commitment to higher education by the nations governors and state legislatures.

A Note to Users of This Report

Detailed information about the procedures used in compiling this report are found in the appendix. We would like, however, to emphasize the following three points about the material contained in this booklet.

First, this report covers only appropriations of state tax funds for operating expenses of higher educational institutions. The Office of Institutional Research believes that these figures are a more valid measure of state support of higher education than total appropriations made by state legislatures since the latter may include reappropriated income received by institutions from student fees and other non-tax sources. The report does not include appropriations for buildings and other capital purposes.

Second, users of the data contained in this report should keep in mind that appropriations from state tax sources listed herein include support not only for instructional programs, but also for research, including agricultural and engineering experiment stations, and a great many public services such as general extension, county agricultural and home demonstration agents, adult education programs, hospitals, and other activities assigned by state legislatures to institutions of higher education.

And finally, the data contained in this report are in preliminary form and subject to verification and change. In several of the state tabulations the items may not add up to the indicated total. Minor discrepancies may be attributed to rounding. Where the discrepancies are substantial, the investigator, while reasonably confident of the total, may have encountered difficulty in obtaining from his sources consistent reports of such items as state scholarship programs, expenses of central governing boards, supplementary budget increases or decreases. To check and verify every item would be a costly and time-consuming project which would delay the publication of this report beyond the time when it is most useful. While the tabulations are subject to change, they provide a reasonably accurate picture of state tax funds appropriated for 1967-68.

Additional copies of this report are available at no charge from the Office of Institutional Research.

INTRODUCTION

FROM \$1.4 BILLION TO \$4.4 BILLION IN EIGHT YEARS

The impressive fact that appropriations of state tax funds for annual operating expenses of higher education in the fifty states have tripled within eight years (1959-67) calls for comment.

- (A) It discomfits and dumbfounds the many who were saying in 1957-58 that the unprecedented appropriations of that year were the "last straw"--the absolute all-time maximum that the states could afford; and the timid economists who were then predicting that it might be barely possible that by 1970 another billion a year could be obtained from all governmental sources--federal, state, and local.
- (B) It gives rise to a question: Why do annual operating costs rise faster than enroll-ments? For during the eight years when annual operating costs were tripled, annual enrollments in higher education were only approximately doubled. Confront this question head-on. There are several factors that add up to a compelling answer:
 - (1) Continuing inflation, gradually lowering the purchasing-power of the dollar, means higher costs for salaries, wages, equipment, and supplies each year.
 - (2) Although faculty salaries have doubled in the past dozen years, the market is now more keenly competitive than ever before, and the largest faculty shortage in history exists and impends; and faculty salaries are not yet "caught up" to comparability with compensation in the other learned professions. Hence salaries (half of the total of annual operating expenses) have risen and will continue to go up at about 6 percent to 7 percent per year—about twice as fast as the rate of general inflation.
 - (3) The explosion of new knowledge forces universities and colleges to modify and modernize their courses, and to add new courses, departments of instruction, interdisciplinary units, and specialized institutes at much more frequent intervals than formerly. As every man of business knows, a new enterprise is an "island of high cost" during the first few years of its existence, until it becomes properly staffed and equipped and well-known to students.
 - (4) Another result of the explosion of knowledge is the flood of new and astronomically costly apparatus and equipment, much of which is already indispensable: computer services, electron microscopes, new copying, duplicating, and projecting devices, and television receivers, to name only a few, and not to mention the separate streams of novel devices for physical, medical and dental instruction and research.
 - (5) An important aspect of the great and continued rise of enrollments is the fact that students are now continuing longer in college and larger proportions of them are going into and completing the upper division, graduate, and graduate-professional studies. This raises the "center of maturity" of the whole institution, and also forces upward its annual operating cost, because unit costs in the upper division are necessarily about twice as high as in the lower division, and at the doctoral level in the arts and sciences or engineering or medicine they are from six to ten or more times as high.

The foregoing are a few of the reasons that combine to cause annual operating costs to rise faster than enrollments.

Vague and uninformed intimations that they can be quickly countervailed by "the economy of scale," as would occur in a factory producing standard bolts; or by huge increases in the student-teacher ratio, aided by motion pictures and television; or by forcing students to do more independent study without benefit of instruction; all must be discounted at least for the immediate future.

The audio-visual "educational hardware" can greatly enrich instruction, and spread its range of diffusion, but no one soundly supposes it can soon displace a single professor or assistant. Independent study, with some regular association with a tutor, is one of the best possible methods of learning, but also the most demanding of tutorial time and therefore the most expensive of all.

- (C) A second question: Why is the annual operating cost of higher education taking a growing share of state tax receipts, and a larger percentage of the Gross National Product than ever before? The answers are self evident:
 - (1) In the half-century since 1920 the percentage of the population of appropriate age getting some education beyond the high school has increased fivefold. Since 1950 it has more than doubled; and at the same time the percentage of youth of college age in the total population has also greatly increased. Higher education is simply a manyfold larger enterprise in comparison with the population and resources of the nation and the states. Instead of an average of 5 to 10 percent of the annual revenues of the states, it will cost more. Instead of 1 percent or less of the Gross National Product, 2 or 2½ percent will be invested in the annual operating expenses of higher education. This will be an increasingly productive investment.
 - (2) Education beyond high school, of all grades from preparation for technicianlevel occupations to the highest graduate and professional instruction and research, is now indispensable for the maintenance of an upgraded manpower supply. It is the mainspring of an upward spiral of economic growth. It is the source of advancement in public health, an enlightened public awareness of social and political issues, and a generally more sensitive and humane civilization.

With these considerations in mind, the great increases in the public investment in higher education are not cause for alarm, but matter of congratulation. They will continue through the 1970's, without hardship, because some of the gains come automatically from economic growth without changes in taxation. The state revenue systems are susceptible of almost constant improvement to make them more productive and more equitable, and can become thrice as productive as they now are. Only the deepest pessimism would deny that within a few years a larger proportion of the huge federal revenues can be allotted to domestic concerns, including higher education. There are overwhelming evidences that increasing support of education beyond the high school is rooted as a paramount public policy of the states and the nation.

During the ensuing few years enormous additional strides in state tax support of operating expenses of higher education will undoubtedly be made. Some of the states have not kept sufficiently ahead of their increases in enrollments. In any year almost invariably a few states temporarily fall behind in the parade of progress. But in general, looking at the record of this current fiscal year 1967-68 and of the preceding eight years, one must have confidence in the wisdom and good intent of university and college governing boards and of the legislatures and governors who are leading the advance. They will receive public encouragement to raise their sights.

*Establishment of a dental school was authorized by statute.

**This 2-year college in Denver, established in 1965, was authorized by the 1967 legislature to become a 4-year institution.

***The 1967 legislature established a statewide system of state junior colleges and
created a new state community college and
vocational school board. It authorized
two state junior colleges—one in Denver
and one in Colorado Springs; and gave to
existing junior colleges the option of
coming under the state board or of
retaining their autonomy under their
existing local boards with partial local
support and the regular annual state aid
of \$500 per student.

*The Maryland Court of A	ppeals sustained a
1066 appropriation to the	his tenuously church-

*The Maryland Court of Appeals sustained a 1966 appropriation to this tenuously church-related college, for capital improvement, as against the contention that it violated the "establishment of religion" clause of the First Amendment to the U. S. Constitution, and the U. S. Supreme Court declined to review the case.

@A 1966 appropriation to this Methodist church-connected college for capital improvement was held unconstitutional in the above decision.

**In the above decision, 1966 appropriations to these two Roman Catholic colleges, for capital improvements, were hend unconstitutional.

+These five Roman Catholic colleges were added to the list of private colleges receiving small tax-fund subsidies for operating expenses in 1967.

APPENDIX I

LATE REPORTS FOR MASSACHUSETTS AND PENNSYLVANIA

FOR FISCAL YEAR 1966-67

Annual appropriations in Massachusetts and Pennsylvania for fiscal year 1966-67 were not completed until near the end of calendar year 1966, and could not be reported in the 7th Annual Summary as of October 1 of that year. Accordingly, they are included here as an Appendix, and are not to be confused with the reports for other states for fiscal year 1967-68, which compose the main body of this Eighth Annual Summary, completed on or about October 1, 1967.

Footnotes - PENNSYLVANIA

*This sum, specifically to enable the University to reduce its fees without loss of operating income, is allocated: for full-time students who are residents of Pennsylvania, \$2,298,000; for part-time students who are Pennsylvania residents, \$800,000.

**This subtotal includes a \$500,000 "reserve" unallocated.

***These sums, specifically to enable the selected private institutions to reduce their fees toward reasonable levels without loss of operating income, are allocated (a) for all students other than medical, (b) for medical students, and (c) for students at off-campus centers, as follows:

	(a)	(b)	(c)_
Temple U	7,887	418	50
U of Pitt	9,264	294	783

The total of tuition reduction supple ments, for the Pennsylvania State University, Temple University, and the University of Pittsburgh, is \$21,793,000.

NOTE: The appropriation of nearly \$22 million to three large universities, expressly to enable them to reduce tuition fees without loss of operating income, is an event of major importance.

The statewide plan for higher education prepared by the State Board of Education and released July 22, 1966, envisioned the three large universities named above as constituting "the Commonwealth University Segment" of the statewide system.

This involves some changes in the relationships of Temple and Pitt to the state of Pennsylvania, which are probably not now fully formulated or entirely clear, but will be developed.

The action of the legislature in approprating large sums to the three universities to enable them to reduce fees is in accord with the declared purpose of the state-wide plan: "To guarantee the availability fo quality higher education at low cost to the individual student."

APPENDIX II

WHAT THE FIGURES ARE INTENDED TO REPRESENT

The date in these annual summaries are derived from the month-by-month and year-by-year operation of GRAPEVINE, a small monthly mineographed newsletter circulated to key persons in each of the fifty states.

The following copy of a recent communication to contributors of information to GRAPEVINE affords a brief traverse of the more significant ground-rules to be observed in reporting the data.

M. M. Chambers
Education Building, Indiana University
Bloomington, Indiana
47401

July 1, 1967

FOR CORRESPONDENTS AND CONTRIBUTORS TO GRAPEVINE:

GRAPEVINE seeks to burden its correspondents as little as possible; but it is necessary, of course, that some throught be given to the exact type of fiscal report sought for the recurring tabulations of Appropriations of State Tax Funds for Operating Expenses of Higher Education for a given fiscal period.

(1) We exclude appropriations for capital outlay.

(Nevertheless, GRAPEVINE appreciates informative statements and documentation regarding appropriations, bond issues, or other devices for providing capital funds. We can make occasional separate stories or exhibits of these, but never commingle or confuse them with appropriations for operating expenses.)

- (2) We <u>exclude</u> any sums appropriated which clearly originated from sources other than state taxes, such as student fees or other institutional receipts. (Some states capture these non-tax funds for the state treasury, and appropriate them to the institutions as a part of the total appropriations for operating expenses; but many states do not. Hence, it is necessary to peel off the non-tax institutional receipts in order to report <u>Appropriations of State Tax Funds</u>.)
- (3) We <u>include</u> any sums appropriated for the annual operating expenses of the institutions of higher education, even if appropriated to some other agency of the state for ultimate allocation and payment to the institutions. (Some states appropriate, either occasionally or habitually, sums for such items as faculty fringe benefits under conditions such that only the total made available at the time can be known, and the actual allocations to several institutions cannot be known until after

the end of the fiscal period. GRAPEVINE wants to report the total made available at the time of appropriation, and generally does not wait for subsequent institutional allocations unless they are obtainable without delay. GRAPEVINE's thrust is the prompt reporting of appropriations; not later reporting of actual expenditures.)

- (4) We include any pre-allocated state taxes whose proceeds are dedicated to any institution of higher education, by passing the process of periodic appropriation by the legislature. (For example, West Virginia has a tax of approximately one cent per bottle on the sale of soft drinks, currently producing about \$4½ million per year, which automatically goes to the West Virginia University Medical Center without legislative appropriation.)
- (5) We would like to <u>include</u>, whenever practicable, <u>separate</u> appropriations for medical centers (including schools of medicine, dentistry, nursing, teaching hospitals, and other appropriate appurtenances of a medical education complex); <u>separate</u> appropriations for agricultural experiment stations and cooperative agricultural extension services; and separate appropriations for branch institutions, regional campuses, and any other off-campus outposts of universities or land-grant institutions. We cannot request this except in instances where it is easily practicable and would not involve delay in reporting.
- (6) We <u>include</u>, in our state-by-state summaries, amounts of state tax funds appropriated as state aid for operating expenses of local public two-year colleges, in the twenty-four states making appropriations for that purpose. Often these appropriations are for a "sum sufficient" on a formula basis so that the exact amount appropriated cannot be determined until the end of the fiscal period, but must be estimated or approximated for GRAPEVINE's purposes.

GRAPEVINE is aware that diversities of practice among the fifty states render it virtually impossible to eliminate entirely all inconsistencies and achieve absolute comparability among states and among institutions; and we repeatedly emphasize that comparisions are of only limited usefulness. But over the years GRAPEVINE visibly improves, and all who contribute to it are performing a valuable service, for which many persons are grateful.
